EDUCATION

Northeastern University - Bachelor of Science in Computer Science - GPA: 3.7/4.0

May 2028 (Expected)

Relevant Coursework: Object Oriented Programming, Graduate Data Structures and Algorithms, Foundations of Data Science, Artificial Intelligence, Computer Systems, Computer Architecture, Theory of Computation, Public Speaking

SKILLS

Languages & Libraries: TypeScript, React, JavaScript, Tailwind CSS, FastAPI, Node.js, Python, Java, C++, Rust, SQL (PostgreSQL)

Tools: Vercel, AWS, Azure DevOps, Salesforce, Docker, Figma, Claude Code, MongoDB, Supabase, Cloudflare, nginx, OpenCV, Gemini

WORK EXPERIENCE

IBM

Sept 2026 - Dec 2026

Incoming Software Developer Co-op

Research Triangle Park, Durham, NC

CIBC

June 2026 - Aug 2026

Software Engineering Intern

Chicago, IL

- Eliminated 10+ hours/week in Azure Devops story board upkeep by engineering a Python automation that fires inside the build pipeline, resolving each merged pull request's work item through the ADO REST API and advancing its card to the target column
- Engineered a Python procedure that populates newly initialized Salesforce Sandboxes by auto-discovering target tables and describing every field, layout, and record type for maximized accuracy in generated records, assisting over 20 teammates for development
- Solved the load-ordering problem by modeling required foreign-key relationships as a dependency graph, detecting circular references with Kosaraju's algorithm and using topological sort to populate tables in order before batch-loading through the SF composite API
- Applied scripting capabilities to automate an error-prone manual codebase audit of 9000+ files for specific hardcoded values, implementing new requirements on demand and delivering results within the same day, saving the team 150+ hours on timeline
- Translated open-ended project tasks and complex deliverable requirements to real solutions; prioritized quick delivery and iteration by emitting organized per-object and aggregated CSV reports, reducing iteration and shortening delivery from 4 weeks to 1

Northeastern University

Jan 2026 - Apr 2026

Program Design I Teaching Assistant

Boston, MA

- Facilitating weekly office hours and 40+ person labs, breaking down abstract programming concepts into intuitive explanations
- Guiding 200+ students through OOP concepts in Python including inheritance, encapsulation, polymorphism, and unit testing design as well as MVC, Observer, Strategy, and publisher/subscriber design patterns

PROJECTS & EXTRACURRICULAR ACTIVITIES

Association for Computing Machinery, Northeastern

Aug 2026 - Present

Software Engineer

Boston, MA

- Building and maintaining a community platform connecting 200,000+ student-athletes and corporate partners, ensuring a smooth UX, rapid feature addition and implementation, as well as secure and fast authentication and state management
- Designing REST API endpoints in Node.js backed by PostgreSQL, covering profile data, connection requests, sponsor engagement, cutting endpoint response time from by 32% through query optimization and indexing

HackBeanpot, Inc.

Apr 2026 - Present

Software Developer

Boston, MA

- Developing full-stack authentication and global state management for the hackathon portal, utilizing the NextAuth framework to securely process sign-in workflows and store user data in MongoDB with a revamped frontend utilizing React and Tailwind CSS
- Collaborating within a 30+ member cross-functional team using Agile methodologies and GitHub Projects to iteratively build, theme, and deploy hackathon websites and internal tooling while conducting PR reviews, project guidance, and timely communication

Finallog

Mar 2026 - Present

- Engineering a full-stack personal finance platform with a Python REST backend and the Gemini API for intelligent image parsing supporting automated bank statement and receipt ingestion with an intuitive and accessible UX curated with Claude Code
- Supporting P2P real-time social expense splitting utilizing WebSockets, achieving an 92% reduction in tracking and coordination

Rebound - Northeastern ACM Hack Health 2026 First Place

Apr 2026

- Built a full-stack injury rehabilitation mobile app using React Native and FastAPI, featuring daily pain tracking, exercise logging, and a personalized recovery dashboard deployed on Expo Go for rapid iteration via nginx and Cloudflare Tunnels
- Utilized Supabase Auth JWT's to secure user connections for injury reporting, daily exercise logging, and voice input with Gemini

Languages: English, Mandarin, Korean (in progress)

Interests: basketball, piano, ice hockey, gardening, japanese rock, personal finances
