EDUCATION

Northeastern University - Bachelor of Science in Computer Science

Relevant Coursework: Object Oriented Programming, Graduate Data Structures and Algorithms, Foundations of Data Science, Artificial Intelligence, Computer Systems, Computer Architecture, Theory of Computation, Public Speaking

SKILLS

Languages & Libraries: TypeScript, React, JavaScript, Tailwind, FastAPI, Node.js, Python, Java, C++, Golang, Rust, SQL, OpenCV

Tools: AWS, Azure, Salesforce, Docker, Kubernetes, Figma, Claude Code, MongoDB, Gemini, Supabase, Cloudflare, nginx, WebSockets

WORK EXPERIENCE

IBM Sept 2026 - Dec 2026
Software Developer Co-op Research Triangle Park, Durham, NC

- Developing and shipping services for the Multi-Cloud Software Platform (MCSP), packaging builds into Docker images hosted on IBM Cloud and orchestrating rollouts across Kubernetes clusters for consistent, repeatable deployments across environments
- Cutting 300+ hours annually from the onboarding timeline for IBM products integrating with MCSP by replacing manual coordination and hand-off steps with automated tooling, standardizing the path teams follow from intake to production
- Engineering Golang services to track and transition per-product onboarding status, redesigning state storage around a PostgreSQL schema to make progress durable and queryable across concurrent onboardings instead of ephemeral in-process state
- Implementing a GitHub Actions workflow syncing Github branch commits to GitLab, removing manual cross-platform upkeep
- Contributing to a React and Carbon-based dashboard functioning as onboarding procedures and status display for stakeholders
- Driving PR management, code reviews, and stakeholder presentations across a cross-functional team to translate vague, open-ended requirements into scoped deliverables shipped 3-5 weeks ahead of schedule

CIBC June 2026 - Aug 2026
Software Engineering Intern Chicago, IL

- Eliminated 10+ hours/week in Azure DevOps story board upkeep by engineering a Python automation that fires inside the build pipeline, resolving each merged pull request's work item through the ADO REST API and advancing its card to the target column
- Engineered a Python procedure that populates newly initialized Salesforce Sandboxes by auto-discovering target tables and describing every field, layout, and record type for maximized accuracy in generated records, assisting over 20 teammates for development
- Solved the load-ordering problem by modeling required foreign-key relationships as a dependency graph, detecting circular references with Kosaraju's algorithm and using topological sort to populate tables in order before batch-loading through the SF composite API
- Applied scripting capabilities to automate an error-prone manual codebase audit of 9000+ files for specific hardcoded values, implementing new requirements on demand and delivering results within the same day, saving the team 150+ hours on timeline

Northeastern University Jan 2026 - Apr 2026
Program Design I Teaching Assistant Boston, MA

- Facilitating weekly office hours and 40+ person labs, breaking down abstract programming concepts into intuitive explanations
- Guiding 200+ students through OOP concepts in Python including inheritance, encapsulation, polymorphism, and unit testing design as well as MVC, Observer, Strategy, and publisher/subscriber design patterns

EXTRACURRICULAR ACTIVITIES

Association for Computing Machinery (ACM), Northeastern Aug 2026 - Present
Software Engineer Boston, MA

- Building and maintaining a community platform connecting 200,000+ student-athletes and corporate partners, ensuring a smooth UX, rapid feature addition and implementation, as well as secure and fast authentication and state management
- Designing REST API endpoints in Node.js backed by PostgreSQL, covering profile data, connection requests, sponsor engagement, cutting endpoint response time from by 32% through query optimization and indexing

HackBeanpot, Inc. Apr 2026 - Present
Software Developer Boston, MA

- Developing full-stack authentication and global state management for the hackathon portal, utilizing the NextAuth framework to securely process sign-in workflows and store user data in MongoDB with a revamped frontend utilizing React and Tailwind CSS
- Collaborating within a 30+ member cross-functional team using Agile methodologies and GitHub Projects to iteratively build, theme, and deploy hackathon websites and internal tooling while conducting PR reviews, project guidance, and timely communication

Languages: English, Mandarin, Korean (in progress)

Interests: basketball, piano, ice hockey, gardening, japanese rock, finance
